quick facts

- Our products reduce or eliminate odor in 2-10 days.
- Our products reduce Ammonia significantly.
- Emergency repairs become significantly less frequent after program implementation, reducing confined space entry and reportable accidents.
- Our non-caustic formulas do not cause the corrosive damage that traditional programs often do.
- A little goes a long way with our concentrated products, saving you money and reducing your carbon footprint.

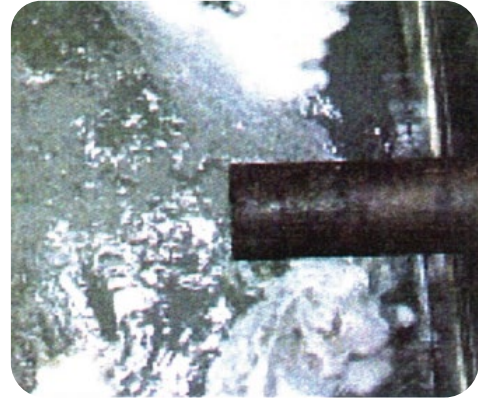

Clearbrooke Technologies® offers comprehensive, eco-friendly FOG treatment programs. Our formulas have the ability to specifically target fats, oils, greases, based on your needs. Our products are enzyme-based, making them biodegradable, pH neutral, APEO-free and non-caustic.

reduce odor in 2-10 days

OUR ENZYME-BASED FORMULAS HAVE THE ABILITY TO TARGET SPECIFIC FATS, OILS, GREASES, AND OTHER ORGANIC MATERIALS. WE HELP YOU CHOOSE WHICH FORMULAS ARE BEST BASED ON YOUR NEEDS.

Driven by the desire to improve the everyday safety of communities and the environment, Clearbrooke Technologies® has provided innovative services and products nationally for nearly 30 years. Proudly based in Mid-Michigan, we offer personalized eco-friendly FOG treatment programs, with services performed by our own skilled technicians. Our products are enzyme-based, making them biodegradable, APEO-free, pH neutral and non-caustic, allowing them to work quickly at reducing odor and FOG. Over the course of two years, our products were strenuously tested for efficacy and safety by Diversey, and in 2009, we made our partnership official.
